

FATTY ACID ESTERS MCT OIL

The **esters from CREMER OLEO** are fatty acid esters produced predominantly **from renewable raw materials**. They are widely used in the **production of cosmetics, body care or hair care products**. Methyl esters are typically used in the manufacture of paints, coatings or adhesives. Fatty acid esters are composed of an alcohol and one or more fatty acids. A special fatty acid ester is **MCT oil**, which is also known as the "all-rounder oil". MCT is the abbreviation for **medium chain triglyceride**. It consists of three components: a compound between two fractionated fatty acids (caprylic and capric acid, C8 and C10) and refined glycerine. MCT oil is colorless, odorless, neutral in taste and is considered a nutritional product.
